The High-Performance WVGA Display Module with maXTouch (AC320005-5) is designed for evaluating the Microchip graphics display solution and graphics library for 32-bit microcontrollers. This board is compatible with both versions of the Multimedia Expansion Board II (DM320005-2 or DM320005-5), as well as with Xplained Pro and Xplained Ultra evaluation kits. This board has a TFT 800 x 480 display with a 24-bit parallel RGB interface with a maXTouch capacitive touch interface.

Features

- 800 x 480 TFT display
- maXTouch MXT640
- QTouch[®] QT1070 (with four navigation keys)
- 4 K-bit 1-wire EEPROM
- Integrated Projective Capacitive Touch (PCAP) panel

Running the High-Performance WVGA Display Module with maXTouch Demonstration Code

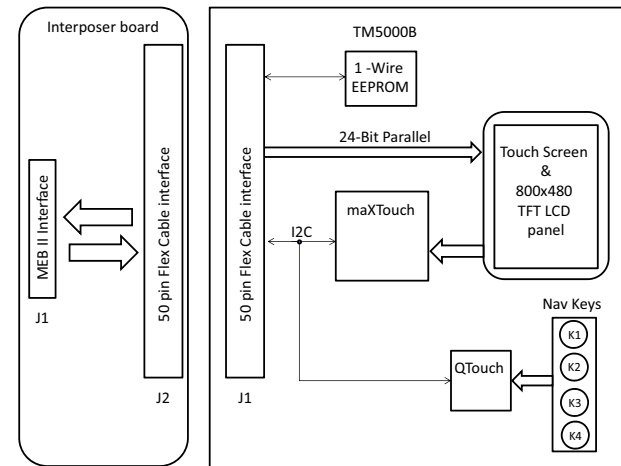

For free Microchip demonstration code and additional information, visit the MPLAB[®] Harmony web page at www.microchip.com/harmony.

After MPLAB Harmony is installed, refer to the following MPLAB Harmony installation folder for demonstration purposes:

C:\microchip\harmony\\apps\gfx

To work with older Xplained Pro and Xplained Ultra evaluation kits, disconnect the ribbon connector from the adapter board and connect it to the GFX port (50 flex) of the Xplained Pro or Xplained Ultra.

CON50

~CHG_QT is connected to Pin 53 for future use if desired.

SCK, MOSI, MISO and ~SS are connected to Pins 54, 56, 58 and 57 (respectively) for future use if desired.

DF12 (3.0)-60DS-05V (86)

ONE_WIRE is connected to Pin 38 for future use if desired.

Microchip "LCD_CS" is not used by PDA LCD interface

Microchip "LCD_Reset" is connected to PDA "DISP". When DISP is low the LCD is in standby mode. When DISP is high the LCD is in normal display mode.

Mounting Holes
